

Model Performance Test

Smart Sorting: Transfer Learning for Identifying Rotten Fruits and Vegetables

Team ID : LTVIP2026TMIDS65554

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No .	Parameter	Values	Screenshot									
•	Metrics	Regression Model: MAE - , MSE - , RMSE - , R2 score - Classification Model: Confusion Matrix - , Accuray Score- & Classification Report -	 The screenshot displays a Confusion Matrix heatmap. The y-axis is labeled 'Actual' with categories 'Fresh' and 'Rotten'. The x-axis is labeled 'Predicted' with categories 'Fresh' and 'Rotten'. The matrix values are: True Positives (Fresh predicted as Fresh) = 85, False Positives (Rotten predicted as Fresh) = 5, False Negatives (Fresh predicted as Rotten) = 7, and True Negatives (Rotten predicted as Rotten) = 103. A color scale on the right ranges from 25 to 100. <table><tr><th></th><th>Predicted Fresh</th><th>Predicted Rotten</th></tr><tr><th>Actual Fresh</th><td>85</td><td>5</td></tr><tr><th>Actual Rotten</th><td>7</td><td>103</td></tr></table>		Predicted Fresh	Predicted Rotten	Actual Fresh	85	5	Actual Rotten	7	103
	Predicted Fresh	Predicted Rotten										
Actual Fresh	85	5										
Actual Rotten	7	103
